ACKNOWLEDGEMENT

I would like to express my special thanks of gratitude to my teacher Prof. Dr. Dibakar Raj Pant and Prof. Dr .Ram Krishna Maharjan who gave us the golden opportunity to do this wonderful project on the topic “Nepali Audio Signal Synthesizer.” Through this project we had a lot of research and we came to know about so many new things we are really thankful to them.

Secondly we would also like to thank our parents and friends who helped us a lot in finalizing this project within the limited time frame.

Milan Maharjan (072/BEX/426)
Ravi Kiran aryal (072/BEX/434)
Tejasvi Raj pant (072/BEX/447)
Tribikram Panthi (072/BEX/448)

ABSTRACT

The technology regarding the development of Artificial Audio Signal Synthesizer is in rapid progress for the last decade. The tech giant like Google has successfully synthesized natural human voice with more or less sentiment. However, with Nepali language it is in the process of development. The purpose of our project is to develop a Nepali Audio Signal Synthesizer from Nepali text as input. The project is done by implementing concatenative model of speech generation. This project can be a breakthrough for Nepali Natural Language Processing and can find its application in numerous field as a primary technology or the supporting technology.
